

# Stack

# Data structures: Stack

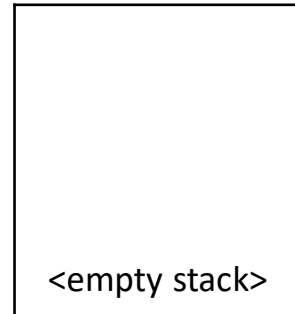

- **Stack** is a data structure in which:
  - Items can be inserted only from one end.
  - Items can be taken only from the **same** end.
- The last inserted item is the first item to be taken.
  - Last Input First Output [LIFO].
- Example:
  - Stack of plates.

# Data structures: Stack Operations

- **push:** Inserts item to the top of the stack. Time complexity is  $O(1)$ .
- **pop:** Removes items from the top of stack. Time complexity is  $O(1)$ .
- **top:** Returns top element of the stack. Time complexity is  $O(1)$ .
- **empty:** Returns “true”, if stack is empty. Time complexity is  $O(1)$ .
- **size:** Returns size of stack. Time complexity is  $O(1)$ .

## Example

# Data structures: Stack

## Problem: Balanced parentheses

- Given an expression string *exp*, develop an algorithm to examine whether the pairs and the orders of “{}()[]<>” are correct in *exp*.
  - For example: “[()]<{<>[()()]}>” is balanced.
  - For example: “[()]” is not balanced.

# Data structures: Stack

## Problem: Balanced parentheses

Algorithm:

- Declare a character stack S.
- Now traverse the expression string exp.
  - If the current character is a starting bracket ('(' or '{' or '[' or '<') then push it to stack.
  - If the current character is a closing bracket (')' or '}' or ']' or '>') then pop from stack and if the popped character is the matching starting bracket then fine else parenthesis are not balanced.
- After complete traversal, if there is some starting bracket left in stack then “not balanced”.

# Data structures: Stack

## Problem: Balanced parentheses

- Initially:

- stack = 

--

- Step 1, added opening bracket:

- stack = 

[	
---	--

- Step 2, added opening bracket :

- stack = 

[	{	
---	---	--

- Step 3, removed opening bracket :

- stack = 

[	
---	--

- Step 4, added opening bracket :

- stack = 

[	(	
---	---	--

- Step 5, removed opening bracket :

- stack = 

--

expression = 

[	{	}	(	)	]
---	---	---	---	---	---

 Pushing

expression = 

[	{	}	(	)	]
---	---	---	---	---	---

 Pushing

expression = 

[	{	}	(	)	]
---	---	---	---	---	---

 Checking

expression = 

[	{	}	(	)	]
---	---	---	---	---	---

 Pushing

expression = 

[	{	}	(	)	]
---	---	---	---	---	---

 Checking

expression = 

[	{	}	(	)	]
---	---	---	---	---	---
